Transfer Learning using Pre-trained Model

Course: Deep Learning Lab

Student Name: Aarya Malghe

PRN: 202301100061

Batch: PEC4

Submission Date: [03-04-26]

Group Members: Aarya, Sanket, Ayush, Harsh

Research Paper:

Research Paper Implementation with Pre-trained Model(Low-Pass Image Filtering to Achieve Adversarial Robustness)

Objective:

- Study a research paper using pre-trained models
- Implement transfer learning using ResNet / VGG
- Fine-tune model and optimize hyperparameters
- Evaluate and compare performance

Github Link : https://github.com/aaarya2809/DL_Assignments/tree/main/Assignment_2

Dataset Link : https://www.kaggle.com/datasets/ayush1220/cifar10?utm_source=chatgpt.com

Task 1: Research Paper Selection and Dataset Preparation

Selected Research Paper: Low-Pass Image Filtering to Achieve Adversarial Robustness

Key Idea: CNN models are sensitive to high-frequency noise Adversarial attacks reduce accuracy Applying Gaussian Low-Pass Filter improves robustness

Dataset Used: CIFAR-10 Dataset (Kaggle / TensorFlow) Classes: airplane, automobile, bird, cat, deer, dog, frog, horse, ship, truck

Preprocessing Steps:

- Resized images to 224x224
- Normalized pixel values
- Applied Gaussian Blur (Low-pass filter)
- Split into training & testing

```
Train - Class 0 (Airplane): 2012
Train - Class 1 (Truck): 1988
```

Task 1 Summary

Dataset: CIFAR-10 (Airplane vs Truck)

Preprocessing Steps:

- Normalization (0–1 scaling)
- Image resizing to 128×128
- Data augmentation (rotation, flip, zoom)
- Gaussian Low-Pass Filtering (based on research paper)

Dataset Split:

- Training: 80%
- Validation: 20%
- Testing: Separate dataset

Output:

- Prepared dataset pipeline for transfer learning model

```
Start coding or generate with AI.
```

Task 2: Model Implementation and Fine-tuning

Model Implementation

We use a pre-trained MobileNetV2 model for transfer learning.

- Pre-trained on ImageNet dataset
- Lightweight and efficient architecture
- Suitable for small datasets

Input size: 96 × 96 × 3
Output: Binary classification (Airplane vs Truck)

```
# ---------------------------------------------------
# STEP 1 — Load Pretrained Model (MobileNetV2)
# ---------------------------------------------------

from tensorflow.keras.applications import MobileNetV2

base_model = MobileNetV2(
    input_shape=(224,224,3),
    include_top=False,
    weights='imagenet'
)
```

```
base_model.trainable = False  # freeze initially

print("Base model loaded ✅")
```

```

    metrics=['accuracy']
)
```

Hyperparameter Optimization

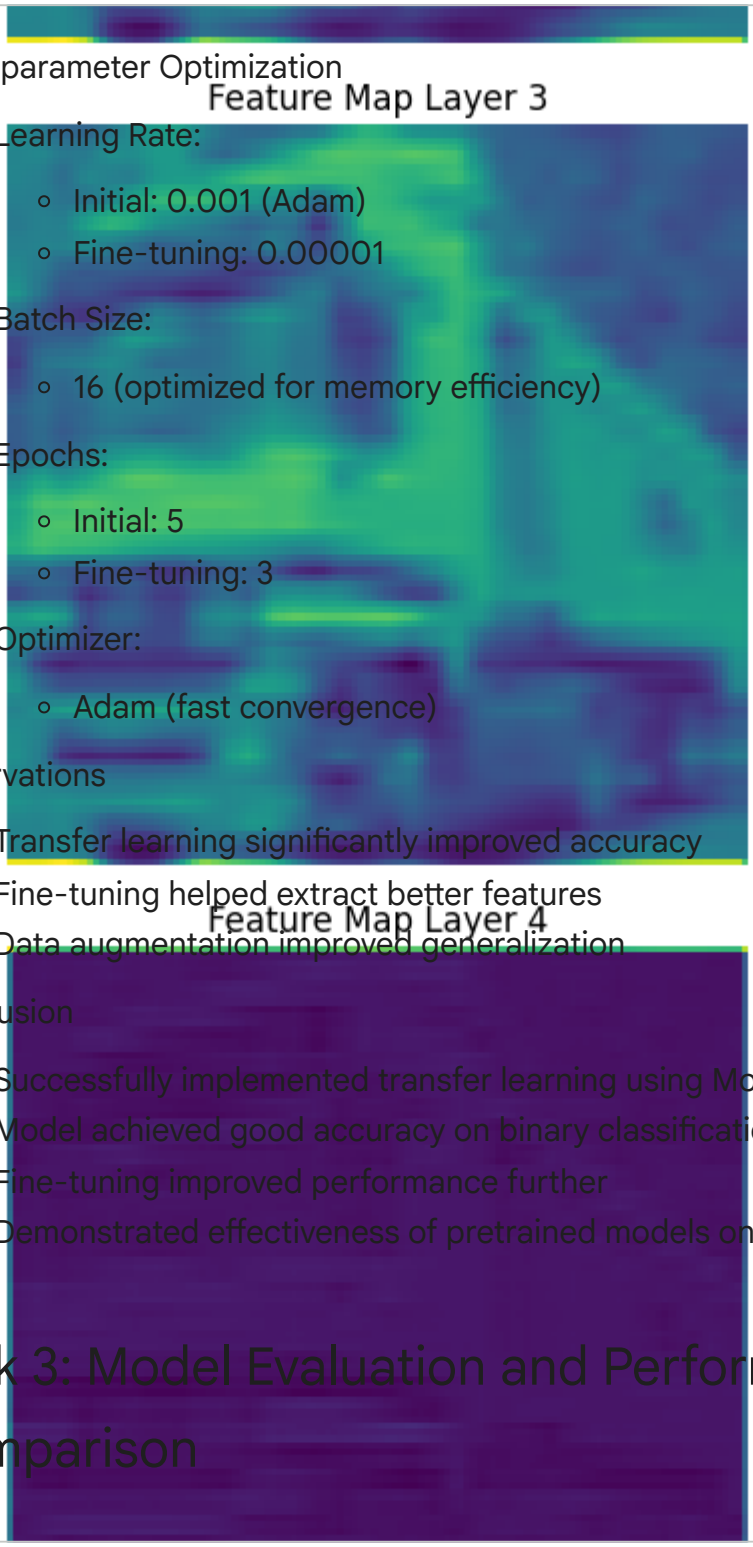
- Learning Rate:
  - Initial: 0.001 (Adam)
  - Fine-tuning: 0.00001
- Batch Size:
  - 16 (optimized for memory efficiency)
- Epochs:
  - Initial: 5
  - Fine-tuning: 3
- Optimizer:
  - Adam (fast convergence)

Observations

- Transfer learning significantly improved accuracy
- Fine-tuning helped extract better features
- Data augmentation improved generalization

Conclusion

- Successfully implemented transfer learning using MobileNetV2
- Model achieved good accuracy on binary classification
- Fine-tuning improved performance further
- Demonstrated effectiveness of pretrained models on small datasets



Task 3: Model Evaluation and Performance Comparison

```
# ----------------------------------------------------
